

Inspect and clean the surface thoroughly

Check the cleanliness of the surfaces and also make sure to clean the wall and remove the old paint on the wall

Go for high-quality supplies and resources

Suggest the best resource as a substandard paint will have less coverage and your customer will end up spending more

Cover furniture and flooring

You should always cover the furniture and floor so that there are no paint drips and splatters.

Use tinted paint

Instead of the white primer, you should choose a tinted primer which will better cover the existing or the old paint.

Go for canvas drop clothes

To avoid spills and platters, use canvas drop clothes instead. Unlike plastic, they're not slippery. They also easily absorb splatters, so you don't have to worry if the paint will go to the floor.

Finish one wall before moving to the next

Don't rush while painting walls, make sure to finish working on one wall before moving to the next.

Wash rollers

Whether you use cheap or expensive rollers, make sure you wash them before use so that no fiber gets on to the walls.

Paint from top to bottom

You should always paint from top to bottom as it is easy and consistent.

Wrap your rollers

Lastly, when you are done painting, make sure to wrap your roller and brush into an airtight plastic bag.
